Figure I.—Southern forest survey region, Midsouth.

# The Woody Biomass Resource of Major Tree Taxa for the Midsouth States

James F. Rosson, Jr.

## INTRODUCTION

Data from the most recent State forest surveys were used to derive estimates of wood and bark biomass for the Midsouth region. This information is important to resource managers, legislators, policymakers, and procurement specialists in regard to the extent, location, and potential availability of the woody biomass resource. Because of the large-scale scheme of sampling, the resource tables describe biomass components at the regional level with smallest breakdowns by individual States.

The extent of wood and bark biomass for all trees on timberland is summarized in this report. The biomass resource is described by dimension (size), forest type, ownership, species, and class of tree merchantability. Shrub and herbaceous vegetation are not included in these estimates. Only estimates pertaining to timberland acreage were included. Other recent work that has dealt with biomass for the Midsouth region has described the resource only as it relates to certain stand conditions (Rosson 1989; Rosson, in press).

For clarification of these data, appendix 1 defines relevant terms. Species that occurred in the Midsouth sample are listed in appendix 2. Appendix 3 tables 1 through 3 describe the Midsouth timberland area by State. Tables 4 through 48 describe the biomass resource by species group (4–6), ownership class (7–12), forest type (13–18), tree class (19–30), diameter class (31–36), basal area class (37–42), and height class (43–48). See the list of tables for a more detailed description of table content. Appendix 4 figures 1 through 7 describe the extent of biomass resource by yield class. For example, in Alabama, 8 percent of the total live tree biomass is in the 0 to 20 tons per acre yield class, and 27 percent of all timberland is in this yield category (fig. 1).

## METHODS

The Midsouth States include Alabama, Arkansas, Louisiana, Mississippi, east Oklahoma, Tennessee, and east Texas (fig. I). The USDA Forest Service conducts periodic surveys of these States approximately every 9 years. The USDA Forest Service, Southern Forest Experiment Station, headquartered in New Orleans, Louisiana, administers these seven States; the work unit responsible for conducting the survey is the Forest Inventory and Analysis (FIA) unit, located in Starkville, Mississippi.

Data from the most recent State surveys were used for this report (table I). Field crews visited approximately 17,000 forested plots over the past 9-year period. At each forest location, trees  $\geq 5.0$  inches in diameter at breast height (d.b.h.) were tallied with a basal area factor 37.5 prism on 10 satellite points (Alabama and Louisiana used only 5 satellite points). Trees  $\geq 1.0$  inch but  $< 5.0$  inches in d.b.h. were tallied on three 0.0036-acre plots. Twenty-three variables were measured on each tree  $\geq 5.0$  inches in d.b.h. The mensurational variables most important to the assessment of biomass estimates were total tree height

Table I.—Midsouth States and year of field work

| State           | Year |
|-----------------|------|
| Alabama         | 1982 |
| Arkansas        | 1988 |
| Louisiana       | 1984 |
| Mississippi     | 1987 |
| Oklahoma (east) | 1986 |
| Tennessee       | 1989 |
| Texas (east)    | 1986 |

and stem d.b.h. Diameters were measured with a metal tape; total heights were measured with a clinometer. Weights were derived for each inventory sample tree by applying regression equations and coefficients developed by the Southeastern Forest Experiment Station (Clark and others 1985, 1986a, 1986b; Clark and Saucier 1990; Clark and Schroeder 1986; Saucier and Clark 1985).

The following equations were used:  
for trees  $\geq 1.0$  inch and  $< 5.0$  inches in d.b.h.

$$Y = a'(D^2)^b$$

for softwood trees  $\geq 5.0$  inches and  $< 9.0$  inches in d.b.h. and hardwood trees  $\geq 5.0$  inches and  $< 11.0$  inches in d.b.h.

$$Y = a'(D^2TH)^b$$

for softwood trees  $\geq 9.0$  inches in d.b.h. and hardwood trees  $\geq 11.0$  inches in d.b.h.

$$Y = a''(D^2)^b(TH)^c$$

where:

$Y$  = fresh or ovendry weight (depending on coefficients used)

$D$  = tree d.b.h.

$TH$  = total height of the tree

$a'$ ,  $a''$ ,  $b$ ,  $c$  = regression coefficients.

Species-specific coefficients were used to estimate fresh and dry weights of trees  $\geq 1.0$  inch in d.b.h. When species-specific coefficients were not available for a particular species, general coefficients for softwoods, soft hardwoods (specific gravity  $< 0.50$ ), and hard hardwoods (specific gravity  $> 0.50$ ) were substituted. It has been demonstrated that these general coefficients derived from grouped species produce reliable estimates for regional surveys (Freedman 1984).

Wood and bark weights were computed for two components of each tree: (1) the total tree above a 1-foot stump to the uppermost twig tips and (2) the main stem above a 1-foot stump to a stem terminus of 4 inches in diameter outside the bark. A third tree component, crown weight, was derived by subtracting stem weight from total tree weight. No merchantability standard was accounted for in the main stem; all stems were estimated to a 4-inch top.

## STATISTICAL RELIABILITY

Three types of error were associated with these estimates: (1) estimating error, (2) application error, and (3) sampling error. Temporal and economic con-

straints govern the standard of accuracy of the statistics because it is imperative, in large regional surveys, that the factors of time and budget be maintained at optimum levels.

Estimating error involves three basic areas: (1) biased error, caused by improperly calibrated instruments; (2) compensating error, caused by instruments of moderate precision; and (3) accidental error, caused by human error in measuring and compiling. All of these errors were held to a minimum by a system that incorporates training, check plots, and an edit (consistency) check. Field personnel undergo training for 3 to 4 months under the guidance of field-experienced personnel. Additionally, supervisors periodically check the field work. Editing checks in the office screen out logical and data entry errors on all plots. It is not possible to statistically measure estimating error, but the FIA unit holds it to a minimum by adequate training, experienced supervision, and emphasis on careful work.

The second type of error, application error, comes from applying biomass estimator equations to deterministic measurements made on inventory sample trees. There were five principal errors here: (1) some species may not have had equations developed; therefore, coefficients for other "similar" species were substituted, (2) the size range of biomass sample trees may not cover the full range of sizes encountered in a large-scale inventory, (3) the geographic range of the inventory may be outside that of the biomass sample trees, (4) trees used in developing biomass coefficients were from fully stocked stands, while inventory plots ranged from nonstocked to overstocked, (5) there was a statistical error associated with the biomass equations. None of these errors were accounted for in the tables.

The third type of error, sampling error, is the error associated with natural and expected deviation of the sample from the true population mean. Thus, the deviation was susceptible to a mathematical evaluation of the probability of error. Sampling errors for State totals in table 49 were based on one standard deviation. That is, the chances are two out of three that, if the results of a 100-percent census were known, the sample results would be within the limits indicated.

Estimates smaller than State totals will have resultant larger sampling errors. The smaller the area examined, the larger the sampling error. In addition, as area or biomass totals are stratified by forest type, species, diameter class, ownership, or other subunits, the sampling error increases and is greatest for the smallest divisions. The computed sampling error takes the area estimate error into account. The following formula was used to derive the sampling error for this report:

$$SE = \sqrt{(A)^2 (S_y^2) + (\bar{Y}_w)^2 (S_A^2)} \times 100$$

where:

$SE$  = sampling error,  
 $A$  = area of timberland,  
 $S_y^2$  = variance of weighted mean biomass estimate,  
 $\bar{Y}_w$  = weighted mean of biomass estimate, and  
 $S_A^2$  = variance of timberland area estimate.

The error of the area estimate contributed very little to the sampling error at State levels and higher ( $\approx 0.1$  percent) but could be substantial at sub-State levels of computation.

## RESOURCE HIGHLIGHTS

### Timberland Area

Timberland totals 99.3 million acres in the Midsouth States. Alabama has the largest timberland base, followed by Arkansas and Mississippi.

Most of the timberland is in private ownership—67.4 million acres (68 percent). Forest industry holds 21.6 million acres (22 percent), with the remaining 10.3 million acres (10 percent) in public domain. Arkansas and Mississippi have the largest national forest acreage, 2.3 and 1.2 million acres, respectively.

The oak-hickory forest type makes up 38 percent (37.9 million acres) of timberland. Tennessee leads the Midsouth with 9.5 million acres. Next in size is the loblolly-shortleaf pine type (24.3 million acres), followed by the oak-pine and bottomland hardwood types, 17.6 and 15.9 million acres, respectively.

### Softwood Biomass

There are 2,556.4 million fresh tons (1,282.5 million dry tons) of softwood biomass in the Midsouth States. Largest concentrations are in Alabama (604.2 million fresh tons), followed by Louisiana (512.0 million fresh tons), and Mississippi (461.6 million fresh tons). These three States account for 62 percent of the fresh softwood biomass in the Midsouth.

### Hardwood Biomass

The majority of the Midsouth's biomass is in hardwood trees—67 percent. Of the 5,299.9 million fresh tons (2,932.6 million dry tons) of hardwood biomass, four States share fairly equal proportions. Tennessee leads all Midsouth States with 1,039.6 million fresh tons, but is followed closely by Alabama, Arkansas, and Mississippi with 972.1, 939.7, and 928.4 million fresh tons, respectively.

### Tree Components

There is a substantial difference between softwood and hardwood trees in proportions of stem and crown biomass. In Midsouth softwoods, 84 percent of the fresh biomass is in stems, 16 percent in crowns. For Midsouth hardwoods, 75 percent of fresh biomass is in stems, with the remaining 25 percent in crowns.

### Species

Only a few of the many species that make up the woody vegetation of the Midsouth forests figure dominantly in the region's biomass. Two of the species are softwoods and seven are hardwoods.

Loblolly pine is the predominate softwood (and tree) in the Midsouth States, with 1,405.0 million fresh tons of biomass. Sweetgum is the predominant hardwood and second in rank to loblolly pine, with 592.5 million fresh tons. The remaining dominant species, ranked in descending order, are shortleaf pine, white oak, southern red oak, water oak, post oak, black oak, and cherrybark oak, with 588.1, 458.6, 360.3, 337.8, 295.7, 157.9, and 157.8 million fresh tons, respectively. Together, these nine top-ranking species account for 55 percent of the Midsouth biomass.

### Diameter Distribution

A large portion of biomass (56 percent) is in the diameter range of 5.0 through 15.0 inches in d.b.h. There are 4,393.9 million fresh tons of biomass in this 10-inch diameter range. A substantial amount of biomass is in the 1.0- through 5.0-inch d.b.h. class—1,001.3 million fresh tons (13 percent of total biomass). Only a small portion of Midsouth biomass, 373.0 million fresh tons, is in trees larger than 25.0 inches in d.b.h.—less than 5 percent of all biomass.

## APPENDIX 1.—Definitions of Terms

### Forest Land Classes

*Forest land*—Land at least 16.7 percent stocked by forest trees of any size, or formerly having such tree cover and not currently developed for nonforest uses. Minimum area considered for classification is 1 acre. The Forest Service inventory defines three types of forest land: timberland, reserved forest land, and unproductive (woodland), all defined below.

*Timberland*—Forest land that is producing, or is capable of producing, crops of industrial wood and not withdrawn from timber utilization. Timberland is synonymous with “commercial forest land” in prior reports.

*Reserved forest land*—Productive public forest land withdrawn from timber utilization through statutes or administrative regulations.

*Woodland*—Forest land incapable of yielding crops of industrial wood because of adverse site conditions.

### Tree Classes

*Commercial species*—Tree species currently or prospectively suitable for industrial wood products. Excluded are noncommercial species. See Species List.

*Noncommercial species*—Tree species of typically small size, poor form, or inferior quality that normally do not develop into trees suitable for industrial wood products. See Species List.

*Growing-stock trees*—Live trees of commercial species classified as sawtimber, poletimber, saplings, or seedlings. Trees must contain at least one 12-foot log in the butt 16-foot section currently or potentially to be classed as growing stock. (A change in the growing-stock definition occurred beginning with the 1988 Arkansas survey. Therefore, Arkansas and Tennessee

data were compiled under the former growing-stock definition standards of at least one 12-foot log in the butt 16-foot section so that their data are comparable to the other five States.)

*Rough trees*—Live trees of commercial species that are unmerchantable for sawlogs currently or potentially because of roughness or poor form in the sawlog portion. Also includes all live trees of noncommercial species. See growing-stock trees.

*Rotten trees*—Live trees of commercial species that are unmerchantable for sawlogs currently or potentially because of rot deduction in the sawlog portion. See growing-stock trees.

*Cull trees*—Rough or rotten trees.

*Hardwoods*—Dicotyledonous trees, usually broad leaved and deciduous.

*Softwoods*—Coniferous trees, usually evergreen, having needles or scalelike leaves.

*Live trees*—All trees that are alive. Included are all size classes ( $\geq 1.0$ -inch d.b.h.), all tree classes, and both commercial and noncommercial species.

*Salvable dead trees*—Standing or downed dead trees that were formerly growing stock and are considered merchantable. One-third of the board-foot volume must be sound in softwoods  $\geq 9.0$  inches in d.b.h., and one-half of board-foot volume must be sound in hardwoods  $\geq 11.0$  inches in d.b.h.; one-half of cubic-foot volume must be sound in softwoods  $< 9.0$  inches in d.b.h. and in hardwoods  $< 11.0$  inches in d.b.h. All salvable dead trees must be  $\geq 5.0$  inches in d.b.h. to qualify.

*Nonsalvable dead trees*—Standing or downed dead trees that were formerly growing stock or cull and are not considered merchantable at the time of the survey. (These trees do not meet soundness, tree class, or size requirements under the salvable dead tree definition.)

## **Forest Type Groups**

*Hemlock*—Forests in which hemlock comprises a plurality of the stocking.

*White pine-hemlock*—Forests in which white pine and hemlock, in combination, comprise a plurality of the stocking.

*Longleaf-slash pine*—Forests in which longleaf or slash pines, singly or in combination, comprise a plurality of the stocking. Common associates include oaks, hickories, and gums.

*Loblolly-shortleaf pine*—Forests in which pines (except longleaf or slash pines) or eastern redcedar, singly or in combination, comprise a plurality of the stocking. Common associates include oaks, hickories, and gums.

*Oak-pine*—Forests in which hardwoods (usually upland oaks) comprise a plurality of the stocking but in which pines comprise 25 to 49 percent of the stocking. Common associates include gums, hickories, and yellow-poplar.

*Oak-hickory*—Forests in which upland oaks or hickories, singly or in combination, comprise a plurality of the stocking, except where pines comprise 25 to 49 percent, in which case the stand would be classified oak-pine. Common associates include yellow-poplar, elms, maples, and black walnut.

*Oak-gum-cypress*—Bottomland forests in which tupelo, blackgum, sweetgum, oaks, or cypress, singly or in combination, comprise a plurality of the stocking, except where pines comprise 25 to 49 percent, in which case the stand would be classified oak-pine. Common associates include cottonwood, willow, ashes, elms, hackberries, and maples.

*Elm-ash-cottonwood*—Forests in which elms, ashes, or cottonwood, singly or in combination, comprise a plurality of the stocking. Common associates include willow, sycamore, beech, and maples.

*Maple-beech-birch*—Forests in which maples, beech, yellow birch, or sweet birch, singly or in combination, comprise a plurality of the stocking.

*Nontyped*—Timberland currently unoccupied with any live trees or seedlings; very recent clearcut areas.

## **Biomass**

*Dry weight*—Mass of tree component when oven-dried to a constant weight at 215 °F.

*Fresh weight*—Mass of tree component at time of cutting.

*Total tree weight*—Weight of wood and bark from a 1-foot stump to twig tips. Leaves, flowers, fruits, and roots are not included.

*Stem weight*—Weight of wood and bark in central stem from a 1-foot stump to a 4-inch top. No merchantability standards are used to define the terminus of

the stem; all trees ≥5.0 inches in d.b.h. are configured to a 4-inch top; trees <5.0 inches in d.b.h. are configured from a 1-foot stump to the central stem twig tip.

*Crown weight*—Weight of wood and bark in upper branches. Crown weight equals total tree weight minus stem weight.

## **Ownership Classes**

*National Forest land*—Federal lands that have been legally designated as National Forests or purchase units and other lands under the administration of the USDA Forest Service, including experimental areas.

*Other Federal land*—Federal lands other than national forests.

*State, county, and municipal lands*—Lands owned by States, counties, and local public agencies or municipalities, or lands leased to these governmental units for 50 years or more.

*Forest industry land*—Lands owned by companies or individuals operating wood-using plants (either primary or secondary).

*Farmer-owned land*—Lands operated as a unit of 10 acres or more from which the sale of agricultural products totals \$1,000 or more annually.

*Nonindustrial private land (individual)*—Lands privately owned by individuals other than forest industries, farmers, or miscellaneous private corporations.

*Nonindustrial private land (corporate)*—Lands privately owned by corporations other than forest industries and incorporated farms.

## **Miscellaneous Definitions**

*Basal area*—The area in square feet of the cross section at breast height of a single tree (or summation of all the trees) in a stand, usually expressed in square feet per acre.

*Diameter at breast height (d.b.h.)*—Tree diameter in inches, outside bark, usually measured at 4½ feet above ground.

*Natural stands*—Stands with no evidence of artificial regeneration, including stands established by seed tree regeneration methods.

*Plantations*—Stands regenerated from planting or seeding.

*Pine*—Tree species of the genus *Pinus*.

*Planted pine*—Pine trees on timberland that show evidence of planting or artificial seeding.

*Natural pine*—Pine trees on timberland that show no evidence of artificial regeneration.

## APPENDIX 2.—Species List

*Species list\* of trees occurring in a sample of Midsouth States*

| Genus                | Specific epithet                | Common name                  |
|----------------------|---------------------------------|------------------------------|
| Gymnosperms          |                                 |                              |
| <i>Chamaecyparis</i> | <i>thyoides</i>                 | Atlantic white-cedar         |
| <i>Juniperus</i>     | <i>silicicola</i>               | Southern redcedar            |
| <i>J.</i>            | <i>virginiana</i>               | Eastern redcedar             |
| <i>Pinus</i>         | <i>echinata</i>                 | Shortleaf pine               |
| <i>P.</i>            | <i>elliottii</i>                | Slash pine                   |
| <i>P.</i>            | <i>glabra</i>                   | Spruce pine                  |
| <i>P.</i>            | <i>palustris</i>                | Longleaf pine                |
| <i>P.</i>            | <i>pungens</i>                  | Table Mountain pine          |
| <i>P.</i>            | <i>rigida</i>                   | Pitch pine                   |
| <i>P.</i>            | <i>serotina</i>                 | Pond pine                    |
| <i>P.</i>            | <i>strobos</i>                  | Eastern white pine           |
| <i>P.</i>            | <i>taeda</i>                    | Loblolly pine                |
| <i>P.</i>            | <i>virginiana</i>               | Virginia pine                |
| <i>Taxodium</i>      | <i>distichum</i>                | Baldcypress                  |
| <i>Tsuga</i>         | <i>canadensis</i>               | Eastern hemlock              |
| <i>T.</i>            | <i>caroliniana</i>              | Carolina hemlock             |
| Angiosperms          |                                 |                              |
| <i>Acer</i>          | <i>barbatum</i>                 | Florida maple                |
| <i>A.</i>            | <i>negundo</i>                  | Boxelder                     |
| <i>A.</i>            | <i>nigrum</i>                   | Black maple                  |
| <i>A.</i>            | <i>rubrum</i>                   | Red maple                    |
| <i>A.</i>            | <i>saccharinum</i>              | Silver maple                 |
| <i>A.</i>            | <i>saccharum</i>                | Sugar maple                  |
| <i>Aesculus</i>      | <i>glabra</i>                   | Ohio buckeye                 |
| <i>A</i>             | <i>octandra</i>                 | Yellow buckeye               |
| <i>A.</i>            | spp. <sup>†</sup>               | Other buckeyes               |
| <i>Ailanthus</i>     | <i>altissima</i> <sup>†</sup>   | Ailanthus, tree-of-heaven    |
| <i>Amelanchier</i>   | spp. <sup>†</sup>               | Serviceberry                 |
| <i>Betula</i>        | <i>alleghaniensis</i>           | Yellow birch                 |
| <i>B.</i>            | <i>lenta</i>                    | Sweet birch                  |
| <i>B.</i>            | <i>nigra</i>                    | River birch                  |
| <i>Bumelia</i>       | spp. <sup>†</sup>               | Bumelia                      |
| <i>Carpinus</i>      | <i>caroliniana</i> <sup>†</sup> | Bluebeech, American hornbeam |
| <i>Carya</i>         | spp.                            | Hickories                    |
| <i>C.</i>            | <i>aquatica</i>                 | Water hickory                |
| <i>C.</i>            | <i>illinoensis</i>              | Pecan                        |
| <i>Castanea</i>      | spp. <sup>†</sup>               | Chinkapin                    |
| <i>C.</i>            | <i>dentata</i>                  | American chestnut            |
| <i>C.</i>            | <i>pumila</i>                   | Allegheny chinkapin          |
| <i>Catalpa</i>       | spp.                            | Catalpa                      |
| <i>Celtis</i>        | <i>laevigata</i>                | Sugarberry                   |
| <i>C.</i>            | <i>occidentalis</i>             | Hackberry                    |
| <i>Cercis</i>        | <i>canadensis</i> <sup>†</sup>  | Eastern redbud               |
| <i>Cornus</i>        | <i>florida</i>                  | Flowering dogwood            |
| <i>Cotinus</i>       | <i>obovatus</i> <sup>†</sup>    | American smoketree           |
| <i>Crataegus</i>     | spp. <sup>†</sup>               | Hawthorn                     |

*Species list\* of trees occurring in a sample of Midsouth States—Continued*

| Genus               | Specific epithet                          | Common name                              |
|---------------------|---|--|
| <i>Diospyros</i>    | <i>virginiana</i>                         | Common persimmon                         |
| <i>Fagus</i>        | <i>grandifolia</i>                        | American beech                           |
| <i>Fraxinus</i>     | <i>americana</i>                          | White ash                                |
| <i>F.</i>           | <i>pennsylvanica</i>                      | Green ash                                |
| <i>F.</i>           | <i>profunda</i>                           | Pumpkin ash                              |
| <i>F.</i>           | <i>quadrangulata</i>                      | Blue ash                                 |
| <i>Gleditsia</i>    | <i>aquatica</i>                           | Waterlocust                              |
| <i>G.</i>           | <i>triacanthos</i>                        | Honeylocust                              |
| <i>Gymnocladus</i>  | <i>dioicus</i>                            | Kentucky coffeetree                      |
| <i>Halesia</i>      | spp. <sup>†</sup>                         | Silverbell                               |
| <i>Ilex</i>         | <i>opaca</i>                              | American holly                           |
| <i>Juglans</i>      | <i>cinerea</i>                            | Butternut                                |
| <i>J.</i>           | <i>nigra</i>                              | Black walnut                             |
| <i>Liquidambar</i>  | <i>styraciflua</i>                        | Sweetgum                                 |
| <i>Liriodendron</i> | <i>tulipifera</i>                         | Yellow-poplar                            |
| <i>Maclura</i>      | <i>pomifera</i>                           | Osage-orange                             |
| <i>Magnolia</i>     | <i>acuminata</i>                          | Cucumbertree                             |
| <i>M.</i>           | <i>grandiflora</i>                        | Southern magnolia                        |
| <i>M.</i>           | <i>macrophylla</i> <sup>†</sup>           | Bigleaf magnolia                         |
| <i>M.</i>           | <i>virginiana</i>                         | Sweetbay                                 |
| <i>Malus</i>        | spp. <sup>†</sup>                         | Apples                                   |
| <i>Melia</i>        | <i>azedarach</i> <sup>†</sup>             | Chinaberry                               |
| <i>Morus</i>        | <i>alba</i> <sup>†</sup>                  | White mulberry                           |
| <i>M.</i>           | <i>rubra</i>                              | Red mulberry                             |
| <i>Nyssa</i>        | <i>aquatica</i>                           | Water tupelo                             |
| <i>N.</i>           | <i>sylvatica</i>                          | Blackgum, black tupelo                   |
| <i>N.</i>           | <i>sylvatica</i> var. <i>biflora</i>      | Swamp tupelo                             |
| <i>Ostrya</i>       | <i>virginiana</i> <sup>†</sup>            | Eastern hophornbeam,<br>ironwood         |
| <i>Oxydendrum</i>   | <i>arboreum</i> <sup>†</sup>              | Sourwood                                 |
| <i>Paulownia</i>    | <i>tomentosa</i> <sup>†</sup>             | Royal paulownia                          |
| <i>Persea</i>       | <i>borbonia</i>                           | Redbay                                   |
| <i>Planera</i>      | <i>aquatica</i> <sup>†</sup>              | Water-elm                                |
| <i>Platanus</i>     | <i>occidentalis</i>                       | American sycamore                        |
| <i>Populus</i>      | <i>deltoides</i>                          | Eastern cottonwood                       |
| <i>Prunus</i>       | <i>serotina</i>                           | Black cherry                             |
| <i>P.</i>           | spp. <sup>†</sup>                         | Plums, cherries (except black<br>cherry) |
| <i>Quercus</i>      | <i>alba</i>                               | White oak                                |
| <i>Q.</i>           | <i>bicolor</i>                            | Swamp white oak                          |
| <i>Q.</i>           | <i>coccinea</i>                           | Scarlet oak                              |
| <i>Q.</i>           | <i>durandii</i>                           | Durand oak                               |
| <i>Q.</i>           | <i>falcata</i>                            | Southern red oak                         |
| <i>Q.</i>           | <i>falcata</i> var.<br><i>pagodifolia</i> | Cherrybark oak                           |
| <i>Q.</i>           | <i>imbricaria</i>                         | Shingle oak                              |
| <i>Q.</i>           | <i>incana</i> <sup>†</sup>                | Bluejack oak                             |
| <i>Q.</i>           | <i>laevis</i> <sup>†</sup>                | Turkey oak                               |
| <i>Q.</i>           | <i>laurifolia</i>                         | Laurel oak                               |
| <i>Q.</i>           | <i>lyrata</i>                             | Overcup oak                              |
| <i>Q.</i>           | <i>macrocarpa</i>                         | Bur oak                                  |

*Species list\* of trees occurring in a sample of Midsouth States—Continued*

| Genus            | Specific epithet                     | Common name        |
|------------------|--------------------------------------|--------------------|
| <i>Q.</i>        | <i>marilandica</i> <sup>†</sup>      | Blackjack oak      |

Rosson, James F., Jr. 1992. The woody biomass resource of major tree taxa for the Midsouth States. Resour. Bull. SO-166. New Orleans, LA: U.S. Department of Agriculture, Forest Service, Southern Forest Experiment Station. 52 p.

Fresh and dry biomass estimates of major trees in seven Midsouth States by forest type, ownership, species, stand basal area, tree class, diameter, and height are tabulated. Information is presented for total tree, bole, and crown components.

**Keywords:** Forest inventory, forest land, green weight, large-scale sample, regional inventory.
